Scenario:

You are a freshman at the University of South Carolina who just a got bike. You find constantly worried about someone stealing your bike even though you lock it all the time. You want something where you could track your bike any second of the day that's when you decided to get the BikeNGo application.

Task 1: Create an account with your name, email address and creating a password.

Task 2: Login to your account and put the bike tracker on away mode

Task 3: Login to your account and track your bike's location also find directions to it

Notes

What changes you should make to your application?
1. I need to make a proper login page after the user makes an account
2. I need a confirmation page telling the user they have successfully put their bike in away or stay mode
3. I need a button on the tracker page that prompts the user to get directions to the bike

What you need to keep the same for your application?
1. The welcome page and the meu page got amazing feedbacks
2. The shortcuts on the bottom of the home page makes it easier for the users
3. The notification center in the app keeps the user up to date on what's going on with their bike
